# What is Enviroseal LDC™?

**Enviroseal Liquid Dust Control (LDC™)** is a concentrate liquid copolymer that is diluted with water and binds soil particles together to prevent Dust and Erosion. LDC™ performs on all types of soils including sand, gravel, silt, clays, and other soil types.

**Topical application** is simple and cost effective. LDC™ permeates the surface and binds the soil which reduces potholes, rutting, and wash boarding.

**LDC™ is environmentally friendly** Non-Toxic and Non-Corrosive

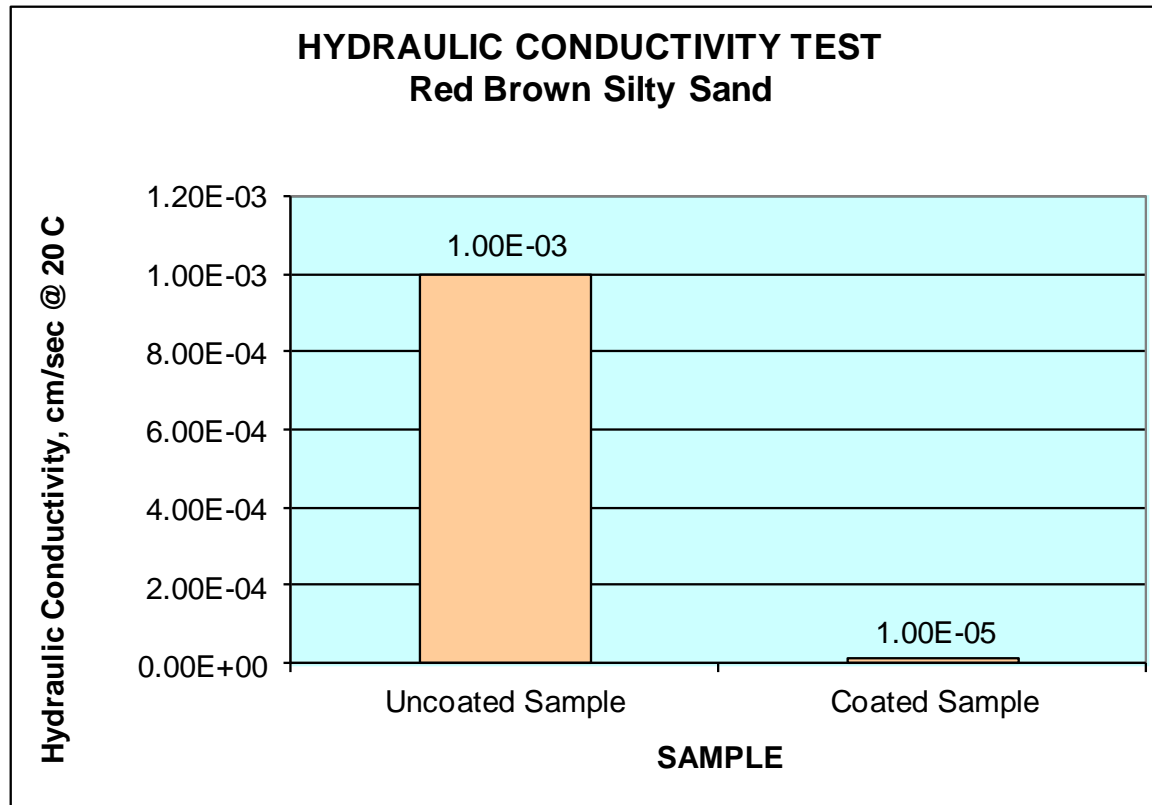

# Applying LDC™ for Dust Control

**Application of LDC™** should be performed with a pressurized water truck. Apply in 2 or more passes, do not let the area dry between coats. For best results, lightly static compact the treated area after +/- 30 minutes. Treated areas can be opened to traffic immediately after application providing surface is not wet. Normal traffic will aid in compaction.

# Soil Permeability Treated with LDC™

## Reduction of Permeability on Plain soil

**LDC™ Topically Applied on Soil at 250 ml/M<sup>2</sup>  
Can Decrease Permeability by 10,000%**

# Previous LDC™ Applications
